Contents

1 *Introduction to Kinetics* 17
- 1.1 Importance of kinetic analysis 18
- 1.2 Computer simulation 19
  - 1.2.1 Dynamic simulation 21
- 1.3 Information content of kinetic data 23
- 1.4 The role of models in biochemistry 24
  - 1.4.1 Lessons from Michaelis and Menten 24
- 1.5 Conventions regarding rate constants 26
  - 1.5.1 Initial velocity versus eigenvalue 28
  - 1.5.2 Rate constant or eigenvalue? 29
  - 1.5.3 Do not use "observed rate constant" 31
  - 1.5.4 Use of the word "rate" 31
  - 1.5.5 The new standard 32
- 1.6 Three timescales of enzyme catalysis 32
  - 1.6.1 Steady-state kinetics 33
  - 1.6.2 Full progress curve kinetics 34
  - 1.6.3 Pre-steady-state transient kinetics 35
- 1.7 Data fitting—equations versus simulation 35
- 1.8 Summary 39
  - 1.8.1 Bullet point summary 39

2 *Computer Simulation* 41
- 2.1 Why use computer simulation? 41
- 2.2 Why KinTek Explorer? 43
- 2.3 How to set up a kinetic simulation 46
  - 2.3.1 Step 1. Define a model 47
  - 2.3.2 Step 2. Define an experiment 49
  - 2.3.3 Step 3. Define the output observable 51
  - 2.3.4 Example: Modeling binding kinetics 51
  - 2.3.5 Simulating ligand binding kinetics 52
- 2.4 Understanding numerical integration 54
- 2.5 Example: Fitting steady-state kinetic data 56
- 2.6 Simulating what you cannot see 58
- 2.7 Introduction to nonlinear regression 59
  - 2.7.1 Evaluating the quality of a data fit 60
- 2.8 Summary 61
  - 2.8.1 Bullet point summary 62

3 *Equilibrium Binding* 65
3.1 Importance of measurements at equilibrium 66
3.1.1 Free energy calculations 67
3.1.2 Analyte or titrant? 68
3.1.3 Introduction to equilibrium titrations 69
3.2 Measuring equilibrium binding 70
3.3 Kinetic endpoint method 71
3.3.1 Simulation exercise 72
3.4 Derivation of hyperbolic binding function 75
3.4.1 Normalizing the signal 76
3.4.2 Scatchard Plot 77
3.5 Derivation of quadratic equation 79
3.6 Quadratic versus hyperbolic equation 81
3.6.1 Tight versus weak binding 83
3.6.2 Choosing which equation to use 84
3.6.3 Guidelines for fitting equilibrium binding data 85
3.7 Equilibrium titration of dimer formation 86
3.7.1 Equations for monomer-dimer equilibrium 87
3.8 Methods to measure equilibrium binding 88
3.8.1 Number of data points needed 89
3.8.2 Time to reach equilibrium 90
3.8.3 Fluorescence 90
3.8.4 Fluorescence anisotropy 92
3.8.5 EMSA 92
3.8.6 ITC 94
3.9 Examples 94
3.9.1 Example: T7 DNA polymerase 94
3.9.2 Example: EPSP synthase binding glyphosate 95
3.9.3 Example: ITC of DNA binding to *mtSSB* 97
3.9.4 Example: How NOT to fit binding data 99
3.10 Competition in binding equilibria 105
3.10.1 Simulating competitive binding 107
3.10.2 Competition against a labeled ligand 108
3.10.3 Multi-step binding and linked equilibria 110
3.10.4 Net equilibrium constant for two-step binding 111
3.11 Summary 113
3.11.1 Bullet point summary 114
4 *Cooperativity* 117
4.1 Ligand binding to a dimeric protein 118
4.2 Simulating multiple ligand binding reactions 120
4.3 Analytic solutions of multi-site equilibrium binding 125
4.3.1 Testing the model and equations 127
4.3.2 Analytic solution of three-site binding 128
4.3.3 Analytic solution of four-site binding 129
4.3.4 The Hill Equation—use with caution! 130
4.3.5 The Adair equation 132
4.3.6 Monod-Wyman-Changeux Model 132

4.3.7 Summary: Equations for cooperativity. 134
4.4 Simulating cooperativity 135
4.4.1 Simulating the MWC model 137
4.5 Fitting data with negative cooperativity 139
4.6 Summary 145
4.6.1 Bullet point summary 147
5 *Steady-State Kinetics* 149
5.1 Goals of this chapter 150
5.2 Steady-state versus transient kinetic methods 151
5.3 Derivation of a simple Michaelis-Menten equation 153
5.4 Measuring steady-state kinetics 155
5.4.1 Propagating and reporting standard errors 157
5.4.2 Units of velocity—confusion in enzymology 158
5.4.3 Michaelis-Menten equation: Linearized forms 159
5.5 Fitting to define k_{cat} and K_m by simulation 161
5.5.1 Fitting to define k_{cat} and k_{cat}/K_m 164
5.5.2 Fitting with five rate constants 165
5.6 Confidence contour analysis 167
5.6.1 Confidence contours—four-parameter model 168
5.6.2 Evaluating the results of data fitting 170
5.7 Fitting full progress curves by simulation 170
5.8 Equations for steady-state kinetic parameters 172
5.8.1 Kinetics of reversible reactions 175
5.9 Meaning of steady-state kinetic parameters 176
5.9.1 Summary: Meaning of k_{cat}, k_{cat}/K_m, and K_m 179
5.9.2 An alternative "Michaelis-Menten" equation 180
5.9.3 Definition of specificity constant 181
5.9.4 Simulating substrate competition 181
5.10 Complications 183
5.10.1 Enzyme activators 183
5.10.2 Substrate inhibition 185
5.11 Enzyme specificity, efficiency, and proficiency 186
5.12 Summary 189
5.12.1 Bullet point summary 190
6 *Steady-State Inhibition Patterns* 193
6.1 Derivation of equations for competitive inhibition 195
6.2 Understanding inhibition patterns 198
6.2.1 Competitive inhibition 199
6.2.2 Uncompetitive inhibition 200
6.2.3 Noncompetitive inhibition 200
6.2.4 Summary of inhibition patterns 201
6.3 Simulating enzyme inhibition 202
6.3.1 Simulating competitive inhibition 203
6.3.2 Simulating uncompetitive inhibition 204
6.3.3 Simulating noncompetitive inhibition 204
6.4 Inhibition patterns for different pathways 205

6.5 Summary 208
6.5.1 Simple rules for predicting inhibition patterns 209
7 *Transient-State Kinetics* 211
7.1 Stopped-flow methods 213
7.2 KinTek stopped-flow instruments 214
7.2.1 Titration module 216
7.3 KinTek AutoSF 216
7.4 Rapid-quench-flow instruments 217
7.5 KinTek Rapid-Quench-Flow 219
7.6 Summary 221
8 *Ligand Binding Kinetics* 223
8.1 Irreversible one-step binding kinetics 223
8.1.1 Concentration dependence of ligand binding 226
8.2 Reversible one-step binding kinetics 227
8.2.1 Concentration dependence of reversible ligand binding 229
8.2.2 Comparing reversible and irreversible kinetics 230
8.2.3 Exponential functions for data fitting 232
8.3 Modeling fluorescence changes in *KinTek Explorer* 233
8.3.1 DHFR binding tetrahydrofolate 234
8.3.2 Measuring dissociation rates by competition 236
8.3.3 Simulating ligand exchange kinetics 236
8.4 The information content of kinetic data 239
8.4.1 Fitting fluorescence signals 241
8.4.2 Simulation exercise 244
8.5 Kinetics of reactions at 1:1 stoichiometry 245
8.5.1 Reversible reactions at 1:1 stoichiometry 247
8.6 Time to reach equilibrium 247
8.6.1 Equilibration time with tight binding 248
8.7 Modeling SPR kinetics 252
8.8 Summary 254
9 *Multi-Step Reaction Kinetics* 257
9.1 Two-step irreversible reactions 258
9.1.1 Analytic solution: Two-step irreversible 259
9.1.2 Errors in fitting double exponential functions 261
9.1.3 Distinguishing the order of sequential steps 262
9.1.4 What is a “lag time”? 263
9.1.5 Example: EcoRI restriction endonuclease 264
9.1.6 Processive DNA polymerization 265
9.2 Rapid-equilibrium approximation 266
9.2.1 Analytic solution of rapid equilibrium model 269
9.2.2 Concentration dependence 270
9.2.3 Globally fitting binding kinetic data 272
9.2.4 The net second-order rate constant 274
9.2.5 Kinetic signature of a rapid equilibrium 275
9.2.6 Example: H-ras p21 275
9.2.7 EPSP Synthase binding S3P and glyphosate 276
9.3 Complete solution: Two-step reversible reactions 278

9.4 Example: Tryptophan synthase 279
9.4.1 Fitting data by computer simulation 281
9.4.2 Confidence contour analysis 281
9.4.3 Fitting data using a three-step model 282
9.5 Rapid equilibrium minimum dissociation rate 284
9.6 Kinetics of ligand exchange 285
9.7 Example: Oligonucleotide binding to a ribozyme 286
9.8 Extending to more complex reactions 288
9.8.1 Kinesin alternating site mechanism 288
9.8.2 Voltage-gated ion channels 292
9.9 Summary 293
9.9.1 Bullet point summary 293
10 *Pre-Steady-State Burst* 297
10.1 Pre-steady-state burst kinetics 297
10.1.1 Simulating burst kinetics 297
10.1.2 Pre-steady-state burst: Irreversible chemistry 299
10.1.3 Effect of increasing product release rate 301
10.1.4 Pre-steady-state burst: Reversible chemistry 302
10.1.5 Estimation of intrinsic rate constants 303
10.1.6 Reversal of chemistry reduces burst amplitude 304
10.1.7 Effect of rapid-equilibrium substrate binding 304
10.2 DNA polymerase burst kinetics 305
10.2.1 Fitting by simulation 305
10.3 Effect of slow substrate binding 306
10.3.1 Use of equations versus fitting by simulation 307
10.4 Global data fitting 308
10.4.1 Global fitting of steady-state, pre-steady-state burst, and stopped-flow fluorescence data 308
10.4.2 Dynein ATPase pulse-chase experiments 309
10.4.3 HIV RT non-nucleoside inhibitors 311
10.5 Summary 313
10.5.1 Bullet point summary 314
11 *Detection of Intermediates* 317
11.1 Rationale for single-turnover experiments 318
11.2 Detection of an intermediate in EPSP synthase 318
11.2.1 A brief history of prior studies on EPSP synthase 318
11.2.2 Active site titration 319
11.2.3 Pre-steady-state burst experiments 320
11.2.4 Single turnover kinetic measurements 321
11.2.5 Globally Fitting EPSP synthase reactions 321
11.2.6 The EPSP synthase pathway 323
11.3 Simulation exercise and global data fitting 324
11.4 Structure proof of the intermediate 327
11.4.1 Observing the enzyme-bound intermediate 328
11.4.2 The question of kinetic competence 329
11.4.3 Free energy profile for EPSP synthase 330

11.5 Tryptophan synthase substrate channeling 331
11.5.1 Alternating site mechanism 333
11.6 Summary 335
11.6.1 Bullet point summary 336
12 *Induced-fit* 339
12.0.1 Mobile loops in enzyme families 340
12.0.2 A brief history of induced-fit 341
12.1 DNA polymerase specificity 342
12.1.1 Pre-steady-state burst kinetics 343
12.1.2 Nucleotide-induced conformational change 345
12.1.3 Global data fitting 347
12.2 Free energy profile 350
12.2.1 Kinetics of mismatch incorporation 351
12.2.2 Nucleoside analog incorporation efficiency 352
12.3 Simulating HIVRT kinetics 354
12.3.1 Exploring HIVRT dynamics 356
12.3.2 Molecular dynamics simulations 357
12.4 Summary 358
12.4.1 Bullet point summary 359
13 *Slow-Onset Inhibition* 361
13.1 Computer simulation of slow-onset inhibition 362
13.2 Slow-onset inhibition follows burst kinetics 364
13.3 Two-step inhibitor binding 366
13.4 Example: Purine nucleoside phosphorylase 368
13.5 Globally fitting slow-onset inhibition data 371
13.5.1 Global versus equation-based fitting 373
13.5.2 Understanding the Burst equation fitting error 374
13.5.3 Measuring the inhibitor dissociation rate 376
13.6 One- versus two-step inhibitor binding 377
13.6.1 Extending the dynamic range 379
13.7 Summary 382
13.7.1 Bullet point summary 382
14 *Lessons from DHFR* 385
14.1 pH dependence 385
14.2 DHFR structure and mechanism 386
14.3 Transient kinetic analysis of DHFR 388
14.4 Effects of point mutations on k_{cat} and K_m 390
14.5 Summary 391
15 *Global Data Fitting* 395
15.1 Standard deviation 397
15.1.1 Standard error and confidence limits 398
15.1.2 Fitting a time-dependent measurement 399
15.2 Fitting data with known sigma values 400
15.2.1 Importance of including sigma values 402
15.3 Fitting data without known sigma values 403
15.4 Evaluating goodness of fit 405
15.4.1 chi by eye 405

15.5 Deriving and using estimated sigma values 405
15.5.1 Normalized residuals in global fitting 408
15.5.2 Evaluating χ^2 410
15.6 Understanding and using the *p*-value 410
15.7 Normalizing fluorescence signals 411
15.8 Confidence contour analysis 412
15.8.1 χ^2 threshold 414
15.8.2 2D confidence contours 415
15.8.3 Well-constrained parameters 417
15.8.4 Overly complex model 418
15.8.5 Resolving an overly complex model 419
15.9 Summary 424
16 *Analysis of Time-Resolved Spectra* 427
16.1 Synthetic data example 428
16.2 Example: Dihydroorotate dehydrogenase 430
16.3 Example: pH titration of fluorescence spectra 434
16.4 Summary 437
17 *Single-molecule Kinetics* 439
17.1 Understanding single-molecule kinetics 441
17.2 Properties of single-molecule kinetic data 443
17.2.1 Histograms represent the first derivative 444
17.2.2 Integration of the histograms 444
17.3 Enzyme mechanisms 445
17.3.1 Fitting single-molecule data by simulation 448
17.4 Effects of enzyme isomerization 450
17.4.1 Irreversible half reactions 451
17.4.2 Simulating single-molecule, multi-step kinetics 451
17.4.3 A lag phase is only possible with energy input 453
17.5 Summary 454
17.5.1 Bullet point summary 455
18 *Abbreviations* 457
